

## 3D Design and Computer Rendering

- Site surveys, scale drawings and 3D computer renders of the event space. Every detail is measured to ensure successful installation and operation.
- Integration of current marketing materials including invitations, brochures, multimedia, and web into the design of the set.
- Overlay of renderings with existing site photos to show options and possibilities.
- Back-stage layout to provide vendors and partners with logistical flow of event and to maximize installation time.
- Integration of renderings with powerpoint, video, web and other media for presentations and documentation.
- Illustrations of decor and other elements.
- Use current industry standard software such as AutoCAD®, WYSIWYG®, 3D Studiomax® and CorelDraw®.
- Use facility drawings and files to maintain accuracy with major area venues on file.
- Integration with lighting design software to program light effects in virtual reality before show load-in.
- Delivery of media via web, CD and DVD in the form of still frames or animations.
